London, UK | neelamkhanwork@gmail.com | <https://www.linkedin.com/in/neelam-khan-6008901a5/>
<https://github.com/neelamkhan123> | <https://neelamkhanportfolio.netlify.app/>

SKILLS

Frontend: JavaScript, TypeScript, React, Next.js, Vue, HTML5, CSS3, Tailwind/SASS

Backend: Python, Django, FastAPI, PostgreSQL, REST APIs

Practices & Tools: Accessibility (WCAG 2.2), component libraries & design systems, Figma, CI/CD, Git, automated testing (Vitest, RTL), AI-assisted development (Claude, ChatGPT, Gemini; Langfuse for prompt eval)

EXPERIENCE

Frontend Engineer - Tony Blair Institute for Global Change

Jul 2025 - Present

- Build responsive, accessible interfaces end-to-end (TypeScript, React, Tailwind) from Figma prototypes through production, integrating with Python/Django/FastAPI backends.
- Design and maintain component libraries and design systems, backed by unit and component tests (Vitest, React Testing Library) for long-term reliability.
- Lead code reviews and mentor junior developers to uphold engineering standards; optimise performance, accessibility, and cross-browser compatibility.
- Build internal AI-powered tools using Claude, ChatGPT, and Gemini, with Langfuse for prompt monitoring, evaluation, and observability.

Frontend Developer - Euro Communications Ltd

Feb 2024 – Jul 2025

- Converted from a 3-month front-end internship to a full-time Frontend Developer role in April 2024, after independently delivering production-ready features during the internship.
- Built and maintained production e-commerce interfaces (TypeScript, Vue.js, Nuxt.js, Tailwind) serving live customer traffic, translating Figma designs into pixel-perfect, reusable components.
- Improved Core Web Vitals through code splitting, lazy loading, and image optimisation; resolved cross-browser and cross-device compatibility issues.
- Contributed to the team's shared component library and followed Git workflow best practices across agile sprint cycles.

PROJECTS

Accessible Component Library - [neelam-ui](#) [npm](#) | [GitHub](#) | [Live Docs Site](#)

- Published a 40+ component React/TypeScript library to npm implementing WAI-ARIA APG patterns for every widget, using native browser primitives (<dialog>, Popover API, inert) over hand-rolled ARIA where possible.
- Enforced accessibility as a CI gate - axe-core runs against every Storybook story - and shipped dual ESM/CJS builds with generated TypeScript types via tsup.

OSS Health Dashboard [GitHub](#) | [Live demo](#)

- Full-stack GitHub analytics dashboard (React, FastAPI, PostgreSQL) syncing PRs, issues, and contributors on a Celery schedule; consumes my own @neelamkhan21/ui library as a production dependency.
- Benchmarked and shipped performance work: Redis caching cut dashboard load time 21x (1,510ms → 71ms) and code-splitting shrank the JS bundle 53%; deployed to a Kubernetes (k3s) cluster.

Task Manager [GitHub](#) | [Live demo](#)

- Decoupled full-stack app (Django REST Framework API + React/TypeScript SPA) with Google OAuth, JWT sessions, and per-user data scoping.
- Automated tests across both layers (Django APITestCase, Vitest + React Testing Library), with independent deploy pipelines on Render and Vercel.

EDUCATION

BA Criminology - Goldsmiths, University of London

2019 – 2023
